Other comments

The master thesis deals with evaluation of Sustainable development of selected EU countries.

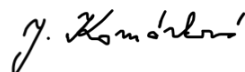

The thesis and its elaboration has shown author's competence in this field, including some ICT skills. The main aim of the thesis is to analyse sustainable development of EU countries based on the Sustainable Development Indicators. Author provides description of used indicators in the beginning. Next, suitable and available data are collected and analysed. Data collection and preparation was very demanding part of the work as far as data were used in Excel and ArcGIS for Desktop. The most important results are visualised by means of graphs and maps and discussed in the last chapters.

The thesis clearly shows that author was able to meet given objectives and the main aim, solve the given tasks by himself and apply previously learned knowledge and skills.

Author worked intensively and with his own initiative, he well responded to all my comments.

I recommend the thesis for defence and I propose the following grading: excellent (1)
