## Other Comments on the Thesis

The aim the thesis was to identify key problems in regional development of selected countries and design a complex of tools which could be used for surmounting main regional gaps. In the theoretical part of the thesis the student precisely introduced theoretical background for the further research. The core of the practical part of the thesis is represented by the research of linkages between various indicators related to the regional development in selected countries. The student describes the methodology of his research as well as the process of the data computing. The focus of the research is pointed to the quality of life and related social and economic data.

The analytical part of the thesis is very deep and precise. On the other hand the part where student was supposed to design measures for surmounting the regional gaps is short and shallow.

The formal aspect of thesis is convenient. Student uses suitable expressions as well as eligible tables and graphs. The presented document fulfils all the criteria for the level of the Master's thesis. I recommend the thesis for the defence.

## Questions and Suggestions for Defence

The epidemic of the Covid-19 disease will have impact also to the regional development. Do you think that the regional gaps will increase or decrease? Explain your opinion.

According to your opinion, what will be the key aspect for the regional resilience?

## Final Evaluation

I recommend the thesis for the defence.

I propose to grade this Master's thesis as follows: **B**
