### Other comments

The aim of the thesis was to design a case study of the use of AHP and ANP in public administration. The author fulfilled the aim as the case study is present; however, only AHP algorithm is used to process the data. ANP is mentioned only as a parent concept to AHP.

Main issue of the thesis is the logical structure. The explanation of the convergence criteria is partly given in chapter 3.1, but there is not mentioned if these criteria are min or max (or other). It can be found in chapter 4.1 but I am missing some structure in this information.
